ENSO ALERT SYSTEM STATUS: EL NIÑO ADVISORY
7 SEPTEMBER 2026

Moderate to strong El Niño is present in the tropical Pacific. Forecasts indicate that El Niño will continue until the first half of 2027 and may reach a very strong state in the coming months before peaking towards the end of 2026. El Niño increases the likelihood of below-normal rainfall, which may lead to adverse climate impacts, including dry spells and droughts in some areas of the country. However, over the western part of the country, above-normal rainfall conditions during the Southwest monsoon season (i.e., Habagat) may also occur.
